

ADAPTIVE PLANNING

Partner with TopBloc to set up the budgeting, forecasting, and reporting platform that provides your team the flexibility to adapt to any changes your organization may encounter.

CONFIGURE A PLANNING SOLUTION AS NIMBLE AS YOU ARE

Workday's Adaptive Planning provides everything you need to establish continuous and comprehensive reporting and analysis. It can be deployed as an independent platform or combined with your existing suite of Workday software in order to create one integrated solution. No matter which path you are pursuing, TopBloc will work with you to configure the system to your exact specifications.

At TopBloc, we understand that flexible and coordinated planning solutions drive better business results.

Allow TopBloc to guide you to a Workday Adaptive Planning solution that enables your team to deliver comprehensive, data-based predictions of the business needs across your organization. From financial planning to operational planning to workforce planning to sales planning, Adaptive Planning provides a single source of truth by linking your numerous plans — and even can be used to account for the impact of various what-if scenarios.

With CPAs accounting for over one-third of our consultants, TopBloc's team has the expertise to address your needs and advise on best practices.

Rather than simply migrating your existing setup, our team works with you to transform your planning processes to become more efficient and scalable.

MOVE FASTER WITH TOPBLOC

Whether you are deploying Adaptive Planning to enhance your existing suite of Workday applications or you are new to Workday all together, TopBloc's SmartLoader tool expedites and simplifies the process.

For customers with pre-existing Workday Financials solutions, SmartLoader can automatically extract information from the financial tenant to develop a coordinated Adaptive Planning solution.

For customers new to Workday, TopBloc can support the deployment of Workday Financial and Workday Adaptive Planning in parallel. Leveraging the data automation features of SmartLoader, our team verifies and ensures that any changes made in one tenant are mirrored in the other to manage concurrent deployments.

In either situation, SmartLoader facilitates a more agile deployment and ensures information across tenants remains in sync.
