

WORKDAY LEARNING

Improve your team's engagement and discover a new approach to employee education by partnering with TopBloc to launch Workday Learning.

ENHANCE YOUR APPROACH TO PROFESSIONAL DEVELOPMENT

Workday Learning redefines workplace learning, combining professional development, peer learning, and required training into a single intuitive application. With all the flexibility you'd expect from Workday, the Learning application can be curated to focus on building the specific skills or expertise your team requires.

Learning Management

Oversee and curate all aspects of your organization's learning program from specifying audiences and creating lessons to managing grading requirements.

Peer Learning

Allow workers from across your organization to learn from one another by uploading videos that share their unique expertise.

Blended Learning

Workday Learning supports both on-demand and in-person courses. Your team can choose to consume information through a hybrid of instructor-led training, videos, webinars, written text, and more!

Learning Campaigns

Group content to deliver relevant information to specific individuals. Campaigns can be developed based on job titles or employee characteristics and responsibilities.

Social Learning

Allow your team to rate and share courses, create their own lessons, and collaborate with one another to boost engagement.

Learning Insights

Flexible dashboards and reports that combine live data from across Workday allow you to measure the value and impact of learning on your organization.

Increase engagement and allow your team to take control of their own educational experience, set personalized preferences that surface relevant content for current or future roles, view recommended learning, and access required material. Ready to start learning with Workday? Contact us today!

GO LIVE ON LEARNING FASTER WITH TOPBLOC & SMARTBUNDLES

At TopBloc, our goal is to get your team up and running with Workday Learning quickly so you can begin seeing the transformative impact of the module on your organization.

With traditional deployment methods, it can take up to 16 weeks to prepare your Learning module to launch. But TopBloc can get you ready for go-live in as few as 9 weeks by leveraging our SmartBundles tool.

SmartBundles provides a way for you to begin your Workday Learning deployment with a head-start. The tool allows for our consultants to drag and drop pre-built configurations that are already 80% complete into your tenant – which enables us to pass significant savings along to our customers, reducing deployment costs by as much as 40%!

Built on the basis of our team's years of experience in configuring best practice setups, we codified this expertise into the SmartBundles tool so that it can be applied again and again. This means that with SmartBundles, you're able to expedite your deployment process by leveraging pre-constructed configurations that have been proven successful for many clients that have come before you – and still have the flexibility to tailor your setup to suit your organization's unique needs and goals before the module is finalized. TopBloc's team even remains involved after go-live to continue optimizing the module. We provide you with a built-in roadmap for future feature enhancements at launch!
