

# Simplify Your Path to Workday

TopBloc's Evolution deployment model offers an accelerated approach to Workday implementation. By leveraging pre-packaged configurations, designed based upon TopBloc's immense deployment experience, clients can go live with Workday in as few as 60 days.

## What is TopBloc's Evolution Deployment Model?

Evolution ("Evo") is an innovative rapid deployment approach specifically designed by TopBloc to meet the needs of customers who want to launch their Workday solution as soon as possible and are willing to delay certain customizations to speed up their implementation timeline and improve the affordability of the software.

Evo offers organizations a pathway to realize the value of their investment in Workday sooner by utilizing pre-packaged configurations to simplify the complexity of the deployment process. Rather than tailoring every aspect of their Workday solution during deployment, clients enrolling in Evo utilize pre-built solutions that TopBloc has curated, based on our experience deploying Workday for hundreds of global customers across a variety of industries, to streamline their experience.

After launch, these customers can enroll in TopBloc's post-production services to enhance and tailor their solution as they continue their Workday journey. TopBloc's end-to-end suite of comprehensive services set clients up for success, as our team of experts can remain involved to continue operating and optimizing our client's systems after go-live.

## Highlights of the Evolution Approach

- Go live on Workday in as few as 60 days
- Can be leveraged for both initial implementations and follow-on Workday enhancements
- Methodology applies to all Workday SKUs, from a full platform deployment to a singular add-on
- Pre-packaged solutions ensure deployments adhere to best-practice tenant configurations while still offering clients the flexibility to tailor the setup to meet their unique business requirements
- Solution can be further optimized following launch with the assistance of TopBloc's Help Desk application management services

## The TopBloc Difference

TopBloc is uniquely positioned to offer Evolution deployments due to our one-of-a-kind tools, such as SmartLoader and SmartBundles.

SmartLoader automates data processes, from extraction to validation, to reduce historically manual processes, lessen the resourcing requirements, and condense the timeline of Workday deployments. While SmartBundles enable clients to replicate TopBloc's success in deploying Workday for past customers by leveraging a set of pre-packaged tenant recipe configurations that were built on the basis of our team's experience designing best practice setups.

SmartLoader enables timeline acceleration, while SmartBundles enables successful configurations to be applied again and again. Together, these tools enable TopBloc to assist clients in successfully streamlining their Workday deployments.
